- ❖ Bootstrap
- ❖ Node.js
- ❖ Express
- ❖ React
- ❖ React Native
- ❖ Angular
- ❖ SQL
- ❖ MongoDB

Education

University of California San Diego
B.S. in Human Biology
June 2019

Pro-Tech Life Safety Services
Emergency Medical Technician (EMT) License
November 2019

CareerFoundry
Certificate in Full-Stack Web Development
September 15, 2022

Projects

Movie App – MERN + MEAN

- ❖ Created a movie platform to give users access to info on movies, and their directors and genres. There are two client-side apps, made with React and Angular respectively. The movie information was retrieved from a self-made server-side API that uses MongoDB.

Meet App

- ❖ Created a serverless app using AWS Lambda to give users access to various development meet-up events around the world. Users can filter events by location and limit the number of events shown at once. Data on the events are visualized using charts.js and the events are fetched using Google Calendar API with Google OAuth 2.0.

Chat App – React Native (If there's room)

- ❖ A mobile chatting app made using React Native, Expo, and GiftedChat. Users can chat, take and send photos and share their geolocation. All messages are stored and loaded using Google Firestore Database.
